

## **Software Engineer - Inbound Technology**

### Job Description

We are looking for a Software Engineer to work on our payment system to deliver the best payment experience for our Japanese customers. Our ideal candidate is a problem solver and a learner at heart. You should have a very high degree of comfort in the programming language of your choice. We offer a flexible work schedule and you get your choice of tools (both hardware and software) and most importantly, the opportunity to work on tough problems with the brightest minds around you.

### Requirements

- Experience with implementing platform components such as RESTful APIs, Pub/Sub Systems, Database Clients.
- Experience with AWS services.
- Experience in working for system development in finance, payment, or similar industries
- Experience in system design, development of web system which handles a massive amount of transactions or requires scalability
- Language ability in Japanese and English is a plus (We have a professional translator but it is nice to have language skills)
- Experience in microservices
