

## **Full Stack Engineer - Inbound Technology**

### Job Description

Our engineering team consists of 7 engineers who came from different countries, such as China, the United States, and Bangladesh. We've been trying to build up a team with a friendly atmosphere, mutual respect, and mindset for excellence.

As a senior full-stack engineer, you will develop and maintain both backend and frontend parts of our services as well as managing our server infrastructure and helping us improve our engineering processes and internal tools. You'll be the one who will be responsible for the backend APIs and Web frontend applications. You also need to be able to improve user experience by working on frontend and backend performance, browser compatibility, accessibility, and so on.

### Requirements

- Experience as a leader or manager in a team of 3 or more engineers
- Microservices development experience
- Experience in application development using Vue.js/Nuxt.js.
- Experience in using Node.js.
- Experience in HTML5 and CSS3 development.
- Interest and knowledge about real estate investment
